

Innovative power distribution for electric vehicle charging.

Starline Track Busway offers a unique overhead solution to power your Electric Vehicle Supply Equipment (EVSE) infrastructure. By design, Starline's open channel eliminates the need for costly electric runs and trenching, drastically reducing installation time and costs up to 90%. The system's versatility allows for quick modifications and reconfigurations of power access points and is compatible with all charging systems. Starline can support the infrastructure needed for the fast-growing electric vehicle market.

SERVICE OFFERING

Need assistance?

Our team of in-house service technicians are ready to assist you with a comprehensive package of implementation services.

BENEFITS

- Reduced site ready time and costs
- Future proof design for growth
- Scalable, relocatable, and reusable

FEATURES & SPECIFICATIONS

- Customized design: compatible with any EV charger
- Versatile mounting: overhead, wall mount, or raised floor
- Plug-in units tap instantly at the exact power point of use
- IP2X and IP54 systems are available for indoor and covered outdoor parking and charging stations
- Modular design optimizes scalability

TECHNICAL DATA

- Customizable section lengths up to 10ft
- 40 to 1200 amp systems, 1- and 3-phase
- Rated up to 600Vac or 600Vdc
- UL, ETL & IEC certifications
- Up to IP54 and NEMA 3R rated
